

Selected Power BI Dashboard Portfolio

A curated selection of dashboards for commercial performance, forecasting, market analysis, delivery monitoring, and operational control.

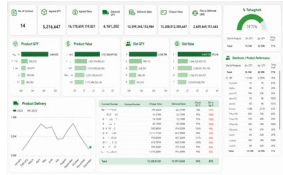

KPI Design

PORTFOLIO OVERVIEW

Five Dashboard Systems, One Decision-Making Approach

Each example combines business logic, data modeling, KPI architecture, interactive analysis, and executive-oriented visual design.

01

Contract & Delivery Performance

Fulfillment, financial coverage, product and distributor variance

02

Distributor & Market Performance

Share, ranking, product mix and weighted market position

03

Sales Trend & Forecasting

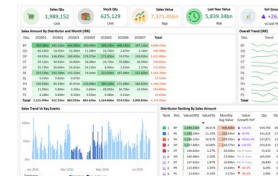

Time intelligence, event impact and forward-looking estimates

04

Brand & Category Market Share

Value-volume comparison and executive insight storytelling

05

Product & Distributor Monitoring

Stock, sales, YoY growth, rankings and exception analysis

PROJECT 01

Contract & Delivery Performance

A commercial operations dashboard for monitoring contract execution and financial coverage.

BUSINESS OBJECTIVE

Provide management with a unified view of agreed quantities and values, delivered performance, cheque coverage, and fulfillment gaps across contracts, products, and distributors.

CAPABILITIES DEMONSTRATED

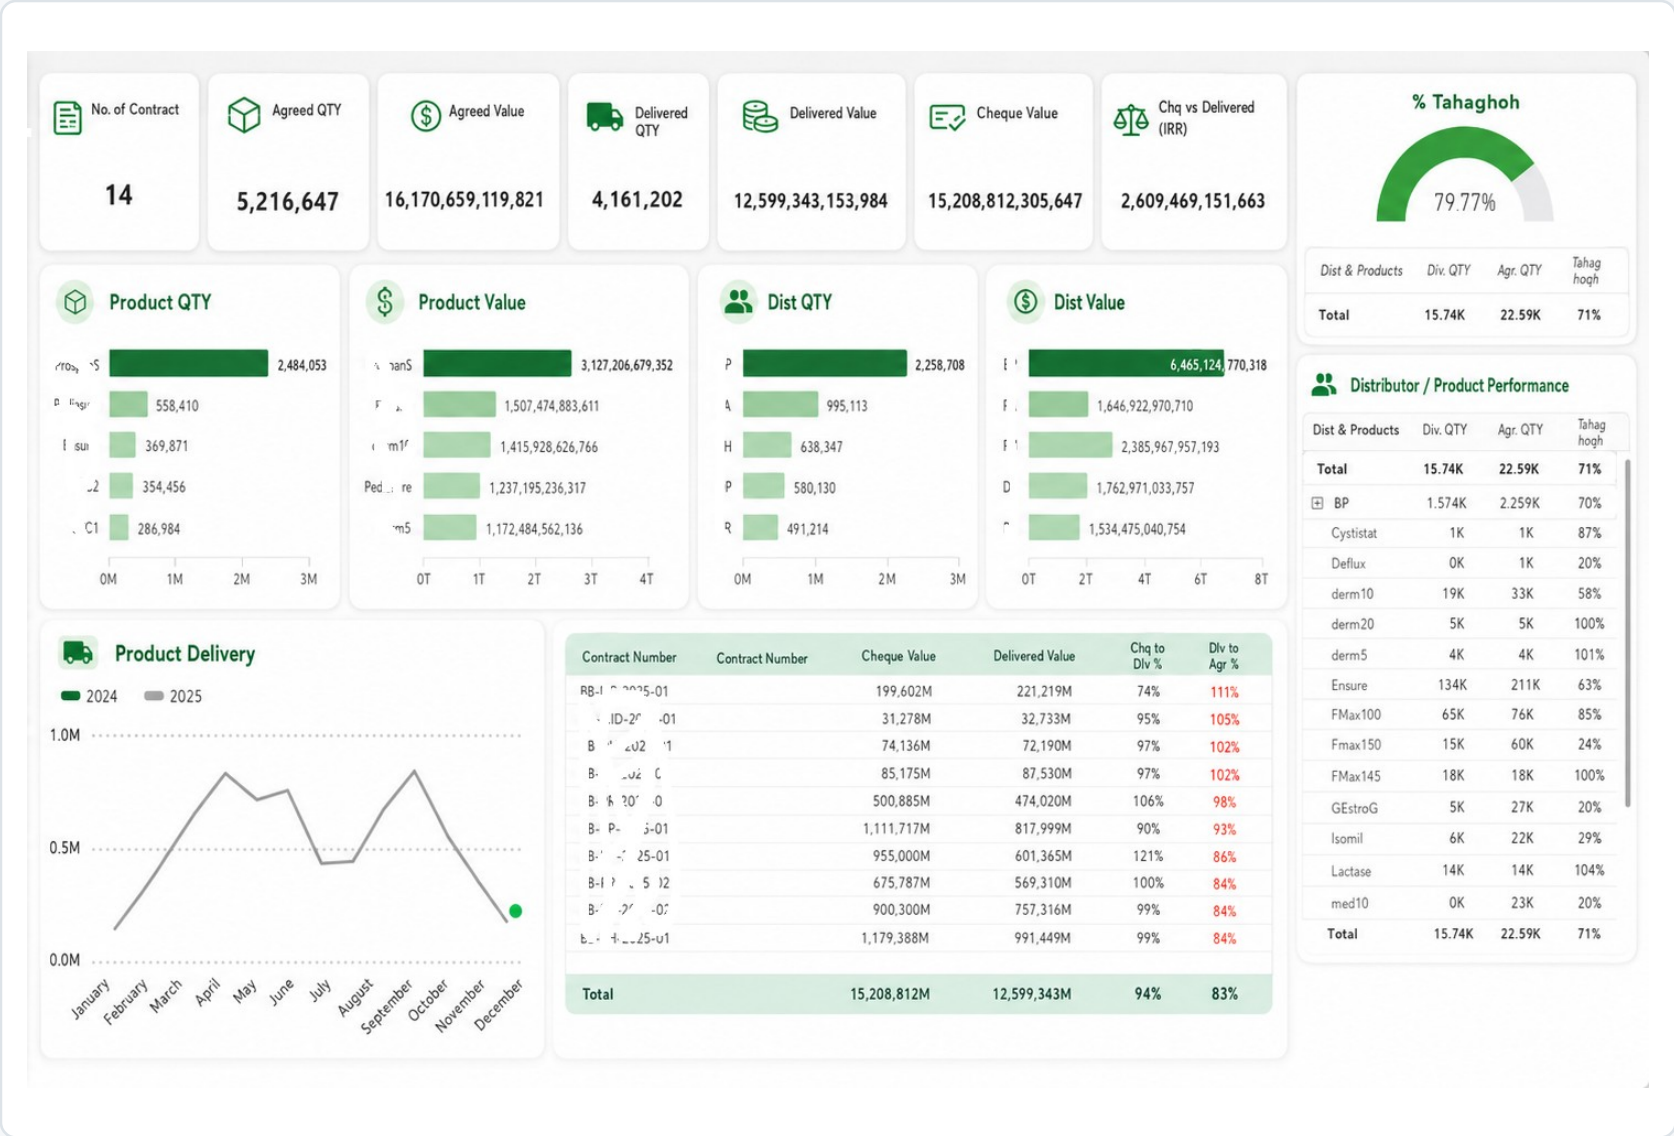

- Multi-level KPI architecture for quantity, value, delivery, and coverage
- Variance analysis: delivered vs. agreed and cheque vs. delivered
- Distributor and product performance drill-down
- Monthly delivery trend and contract-level exception reporting

TOOLS

Power BI

DAX

Power Query

PROJECT 02

Distributor & Market Performance

A market-oriented dashboard for distributor comparison, product mix, and commercial positioning.

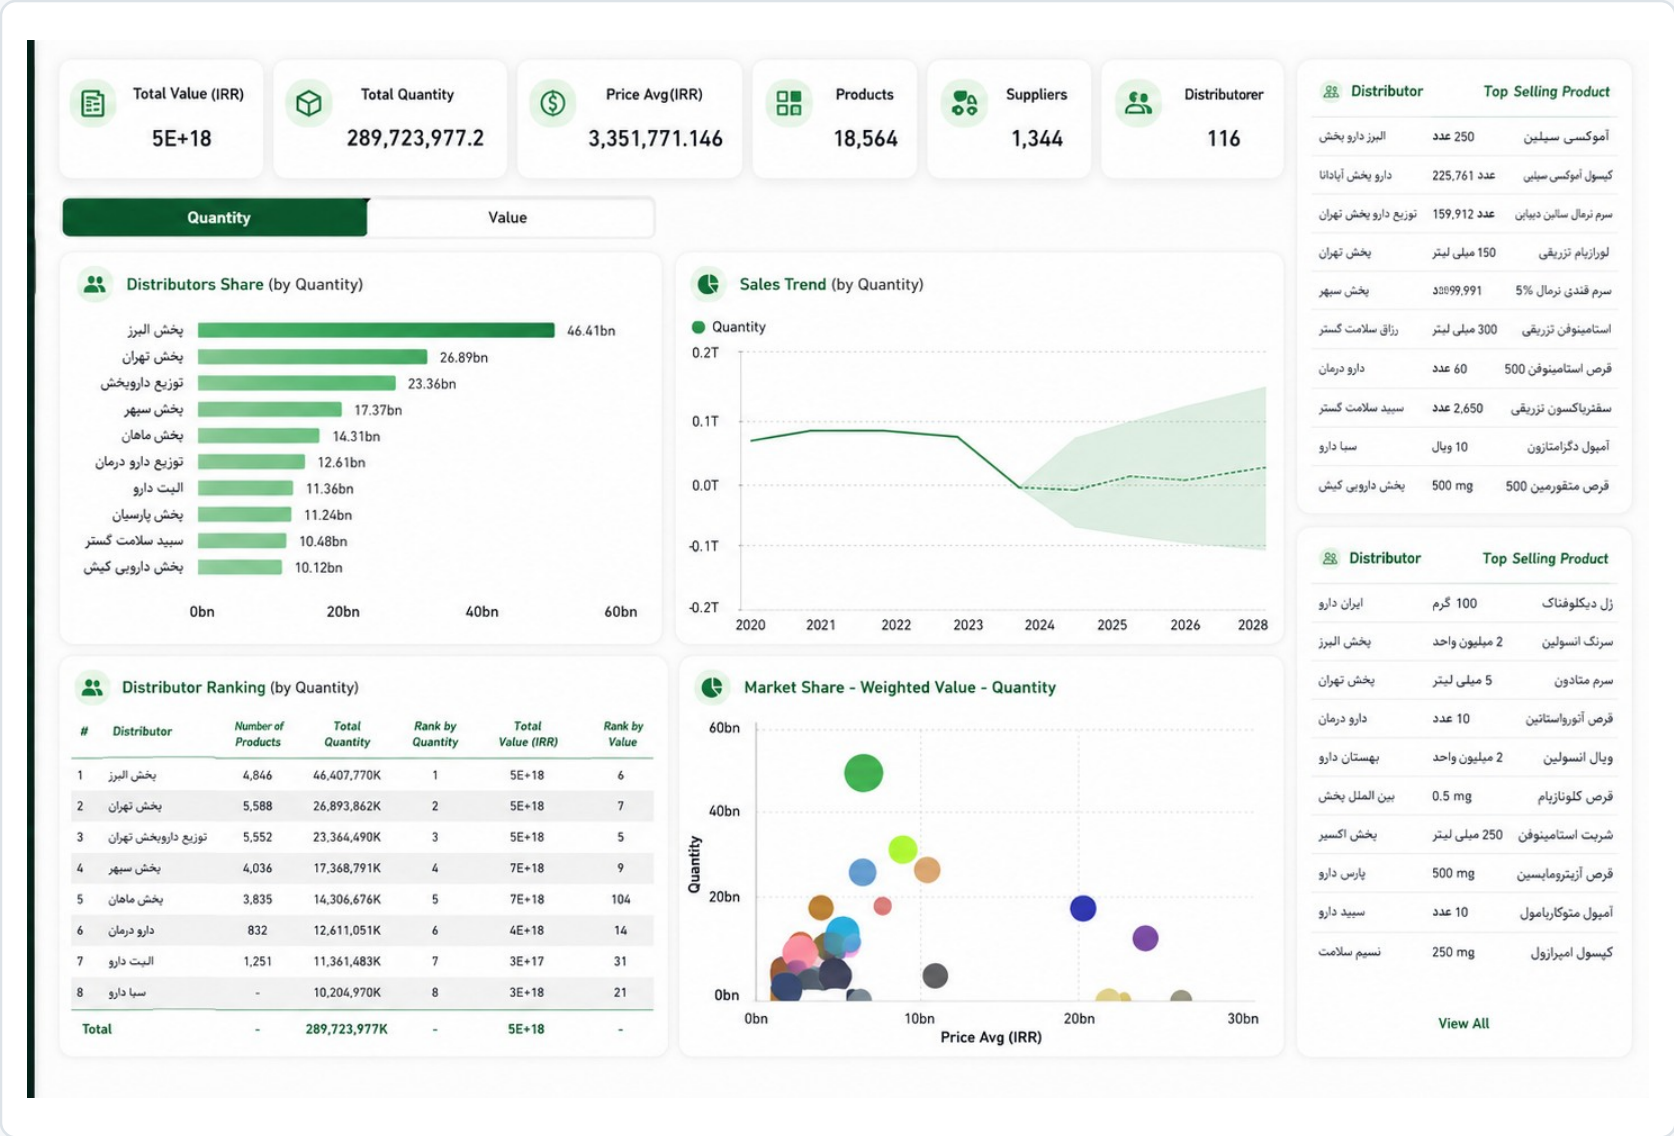

BUSINESS OBJECTIVE

Enable decision-makers to compare distributor contribution by quantity and value, identify leading products, evaluate rankings, and understand market position through multiple analytical perspectives.

CAPABILITIES DEMONSTRATED

- Distributor share and ranking by quantity and value
- Top-selling product analysis for each distributor
- Weighted market-position analysis using bubble visualization
- Trend and forecast view with interactive quantity/value switching

TOOLS Power BI DAX Market Analysis

PROJECT 03

Sales Trend, Impact Analysis & Forecasting

An executive dashboard connecting historical performance, external events, and future sales expectations.

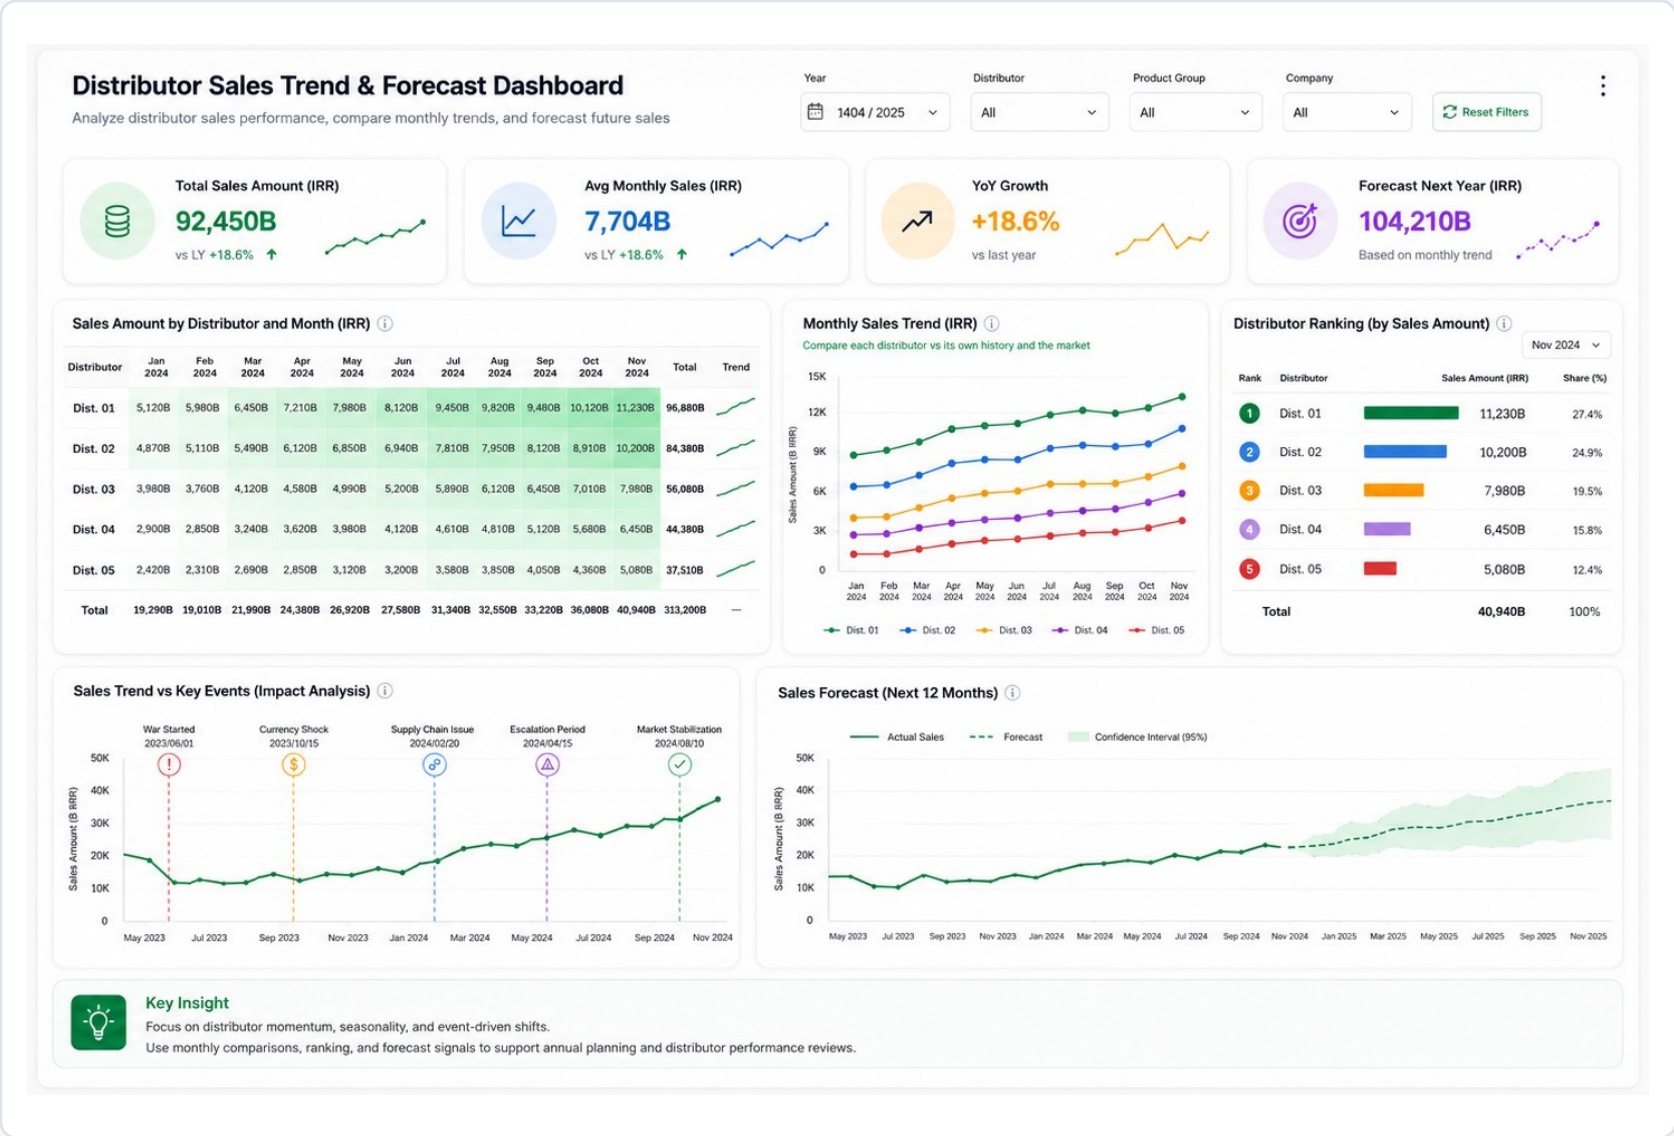

BUSINESS OBJECTIVE

Support distributor performance reviews and planning by combining monthly sales, year-over-year growth, event impact analysis, rankings, and a forward-looking 12-month forecast.

CAPABILITIES DEMONSTRATED

- Monthly sales matrix with compact trend indicators
- Dynamic distributor ranking and share calculation
- Event annotations for contextual performance analysis
- Forecast visualization with confidence interval and KPI summary

TOOLS Power BI Time Intelligence For

PROJECT 04

Brand & Category Market Share

A bilingual-ready sales dashboard comparing value share, volume share, brand performance, and category structure.

BUSINESS OBJECTIVE

Translate complex market and sales data into an accessible executive story, highlighting brand position, category mix, comparative growth, and high-priority commercial insights.

CAPABILITIES DEMONSTRATED

- Value-share and volume-share comparison by brand
- Category composition through treemap analysis
- Performance table with totals and market-share metrics
- Automated key-insight panel for management communication

PROJECT 05

Product & Distributor Status Monitoring

A detailed operational dashboard for sales, stock, growth, ranking, and exception monitoring.

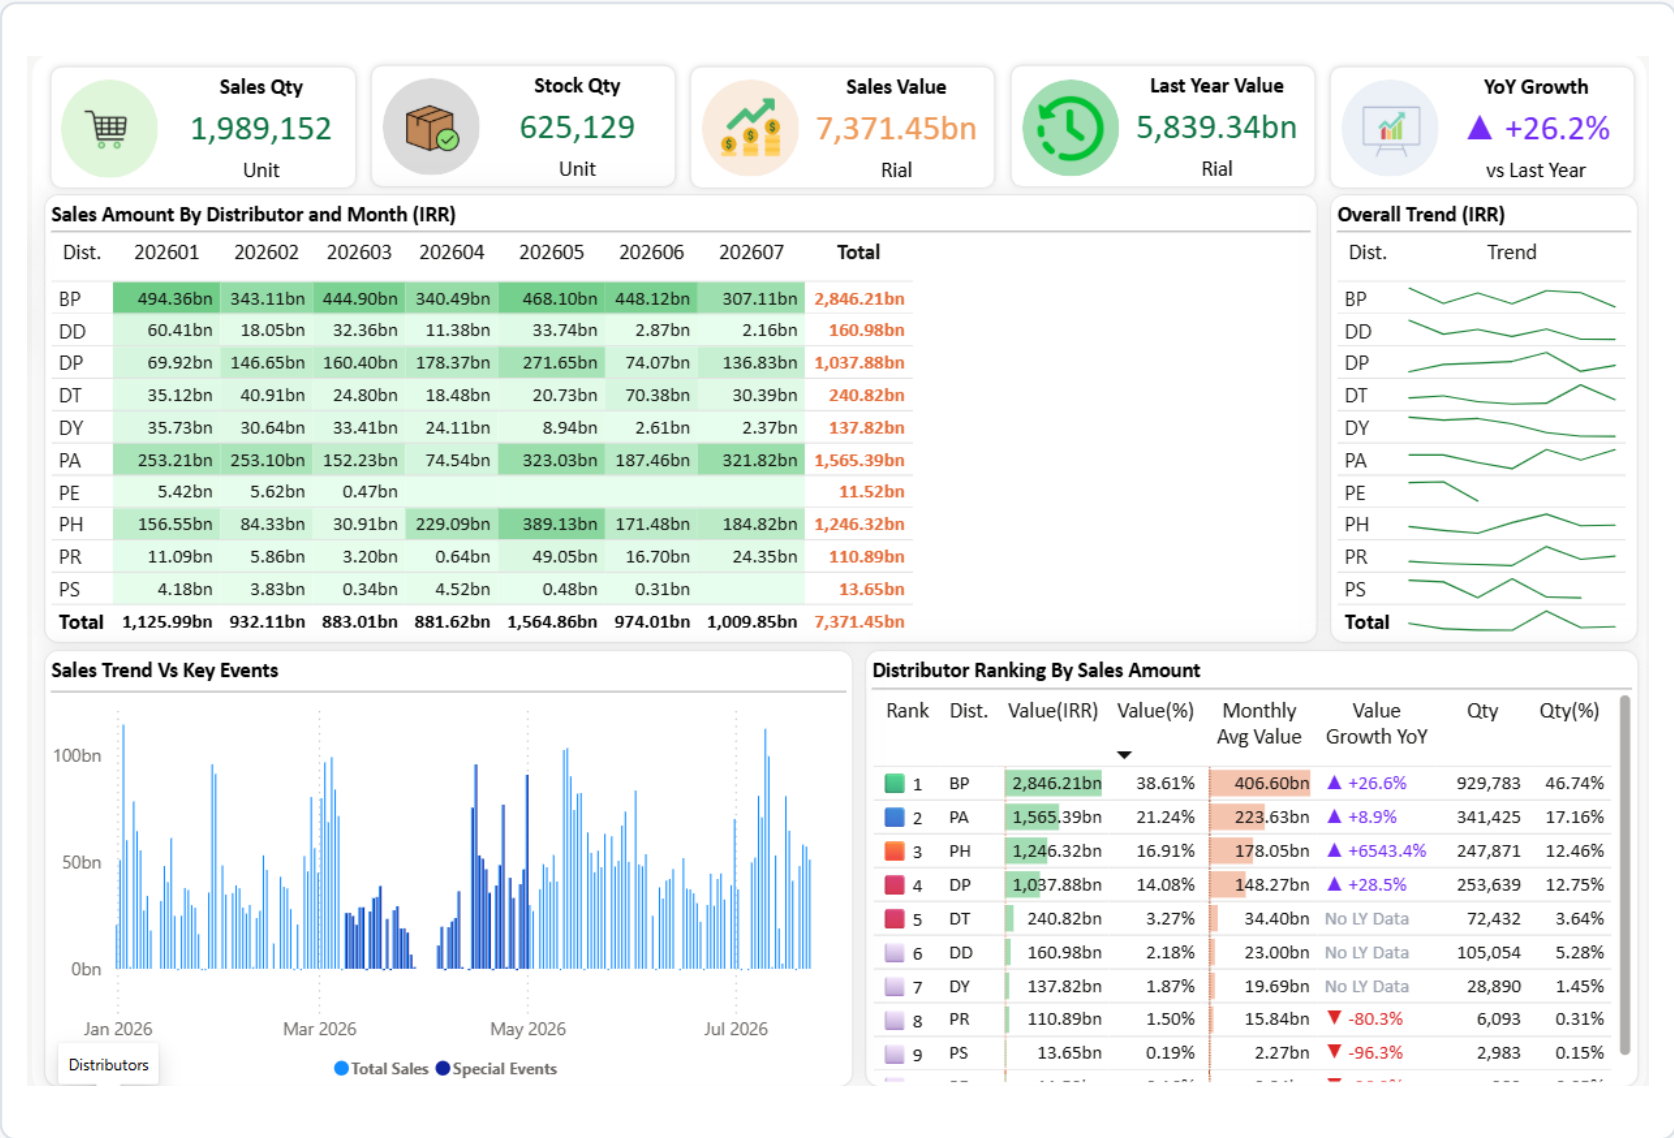

BUSINESS OBJECTIVE

Give commercial and supply-chain teams a detailed monitoring layer for distributor performance, stock availability, current sales, prior-year comparison, growth, and unusual time-period events.

CAPABILITIES DEMONSTRATED

- Matrix heatmap for monthly sales by distributor
- Stock, current value, prior-year value, and YoY growth KPIs
- Distributor ranking with conditional formatting and sparklines
- Event-aware trend monitoring with multiple operational filters

TOOLS Power BI DAX Conditional Formatting

From Data Preparation to Executive Decisions

Core capabilities represented across the selected dashboard examples:

- Power BI dashboard development
- DAX measures and time intelligence
- Power Query and data preparation
- Data modeling and KPI architecture
- Interactive filters and drill-downs
- Executive reporting and storytelling
- Distributor and product analytics
- Market share and performance ranking
- Forecasting and event impact analysis
- Conditional formatting and exception monitoring
